EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Joe Baker on 6/19/06.

2. An extension of time under 37 CFR 1.136(a) is required in order to make an examiner's amendment which places this application in condition for allowance. During a telephone conversation conducted on 6/19/06, Mr. Baker requested an extension of time for ONE MONTH(S) and authorized the Director to charge Deposit Account No. 06-1050 the required fee of \$60 for this extension and authorized the following examiner's amendment. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

3. The application has been amended as follows:

In the Specification, page 1, line 5, after "2001" the phrase – (now U.S. Patent No. 6,759,010) – has been added.

In claim 1, line 4, after “one other sensor of the plurality of sensors” the phrase – such that each sensor of the plurality of sensors comprises regions of a first conductive material and regions of a second material compositionally different than the first material – has been added.

In claim 5, line 4, after “one other sensor of the plurality of sensors” the phrase – such that each sensor of the plurality of sensors comprises regions of a first conductive material and regions of a second material compositionally different than the first material – has been added.

4. The following is an examiner’s statement of reasons for allowance:

In the independent claims 1 and 5 applicant has claimed a plurality of sensors having the following basic combination of features: a first conductive material and a second material compositionally different than the first material such that each sensor of the plurality of sensors comprise regions of the first conductive material and regions of a second different material and *at least one sensor of the array comprising a different thickness than one other sensor*. The Examiner considers Lewis et al. (5,571,401) to be the closest prior art. Lewis ('401) teaches a sensor with regions of a first conductive material and regions of a second material compositionally different than the first material, but does not teach nor suggest varying the thickness between sensors.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dwayne K. Handy whose telephone number is (571)-272-1259. The examiner can normally be reached on M-F 8:00-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jill Warden can be reached on (571)-272-1267. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
